E-Municipality Modules

- Mayoralty Module
- Solutions Service
- IT Module
- System Management Module
- Budget-Accounting Module
- Income and Revenue Module
- HR Module
- Municipal Police Module
- Complains and Suggestions Module
- Documentation Module
- Bidding Module
- Map Support Module
- Online Payments Module
- Address Information System Module
- Subscription management Module
- Electronic Sign Module
- Mobile Municipality

Services and Products

- Developing Software
- Preparing a Project
- Installing
- Data Transferring
- Integration
- Operation
- System Support
- Updating Current System
- Training
- Advising

Why Alfabim?

- Experienced Staff
- Technical Support
- Large Scale of Products
- Using most suitable software
- Training and Advising Support

Main Functions of Alfa MIS

- **Can work wherever having an internet.**

E-Municipality applications are web based applications. That is the reason, from any computer, thin client, or any mobile appliance which support java, can easily connect the system from all around the world unless they have internet. It does not need download any other software like exe file. User may feel like work on his own desktop.

- **Can work with Digitalizing Information System.**

Address data entries can be done with using data from database, in Alfabim MIS applications (these data's are; street names and numbers, house numbers and parcel numbers). Users cannot be entering new entries with his initiative. If there is no data on database, it can be controlled by digitalizing service and it helps to keep up to date.

- **Can be configured on reducing loss of income to minimum.**

System can work synchronized with Management Information System (MIS), digitalization and International Address database, so this prevent to mistakes about wrong address data for taxpayers, also prevent re-entry for the same data. Moreover, system allows municipalities for all transactions through this digitalization system more accurately.

- **Can be integrated Urban Information System and provide digital mapping.**

All the actions done by the departments within the municipalities can be synchronized with digital maps; this helps to follow new entries, continuously works and completed works.

If it is necessary user can be apply to digitalize map info within the Alfabim MIS. All address details can be chosen.

- **Can Provide Single Register.**

This tool can help the citizen for having only one registration number instead of using different number for each department. We can use the Turkish ID no as a Single Registration number.

Mahalle Adı	Sokak Adı	Kapı No
Yahyakemal	Bestekar Sokak	1
Telsizler	Başçı Sokak	10
Talatpaşa	Bilgin Sokak	10A
Şirintepe	Bülent Sokak	11
Seyrantepe	Babacan Sokak	12
Sanayi	Bent Sokak	12A

- **Personal ID comes automatically from ID Shared System.**
ID Shared System and National Address Database support the system. When citizen enter his National ID on the system, all of his ID details come up on the screen.
- **Coordination between departments.**
If any department enters a new data to the system, other departments can easily see such information, unless they have given authorization.
- **Can provide Mobile Signature and Digital Signature.**

Other functions of the system:

- If there is a new law comes up, it can be easily adapted...
- Due to the modular system, different modules can be added after installations...
- It can be developed with Java, that's why it can work all appliances which support java. It also allows e-municipality on mobile phones.
- All transactions can be recorded. System work with high performance and more secure database.
- User friendly system:
 - System has many report templates. Also users can create new reports using (Jasper Report, Business Intelligent, iReport etc) and they also save their reports with excel, word, pdf, xml and html formatted.
 - System use SOA structure this helps to contact other web site like banks, governments officials web site etc. also using this system can allows sending e-mail or sms via the system.
- System can have back up regularly.

Awards

Alfa MIS has **IT e-municipality** awards in **Local Government Project** contest.

One of Alfa MIS user is Fatih Municipality in Istanbul, Mayor of Fatih Municipality have their awards from Prime Minister, Recep Tayyip Erdoğan.
